

GET aHEAD

Types of HTTP Requests : <https://developer.mozilla.org/en-US/docs/Web/HTTP/Methods>

Here we are given a website that has two buttons 'blue' and 'red' that change the background of the website to the respective color.

Using burpsuite, and foxy proxy, we can intercept the web traffic.

When clicking blue, we get a post request.

When clicking red, we get a get request.

Looking a list of http request listed by Mozilla online, we can use burpsuite to modify the packets being sent to the website with a different request type.

Because of the name of the challenge, I chose to try sending a HEAD request.

So, when changing the request type to HEAD in burpsuite we get sent back the flag in the response even though the webpage appears blank.
